EDITORIAL

TO A YEAR FULL OF COLOUR

BOUNCING BACK

It was with great joy that we were able to see some of you again in the year gone by after these times of collective uncertainty. Despite the obstacles, **we remain at your side**, via videoconferencing, videos and social media, more energetic and determined than ever. Whether in person or via video, our team of technical experts is here to give you advice and tailored assistance however, whenever and wherever you need.

In this year's **special novelties catalogue** we are proud to introduce three Halios® FANTASIA® with a larger flower, two fringed CURLY® with a round and compact shape, and an early flowering fringed CRISPINO® mix. Our Mini series is joined by ABSOLU® de MOREL, a scented VICTORIA of irresistible charm with its own marketing kit, and by two additions to the SMARTIZ® line, Bordeaux and Rose Bengal.

Be sure not to miss our special new promotion campaign targeting end consumers: **SHARE THE JOY** with our INDIAKA® flagship variety.

Browse through this catalogue as you would read a magazine and discover our range of Reds for every season and pot size, as well as our methodology for attributing the OUTstanding Cyclamen® label to deserving plants. You'll also love learning about **the vigour of Morel cyclamen** and their secular tolerance to heat.

It is in this vein and with confidence in the future that Morel continues to cultivate its expertise to best meet your needs and offer you ever more technical and marketing support, to further enhance your own know-how.

Many other cyclamen creations are in the pipeline. I hope to share them with you very soon.

Eric Beaudé, CEO

OUTSTANDING CYCLAMEN®

THE LABEL FOR THE BEST OUTDOOR VARIETIES

Our **OUTstanding Cyclamen®** varieties are tested every year at Fréjus where the outdoor performance of several varieties is assessed on a regular basis with the utmost rigour.

OUTstanding Cyclamen® is our label for a selection of the cyclamen varieties most suited to outdoor conditions. It attests to long-lasting flowers in gardens and on balconies and terraces.

Fréjus

131 VARIETIES TESTED

177 CONTAINERS
6-8 plants per container

15 WEEKS OF ASSESSMENT
October 2021-January 2022

NOTE:
BIG FLOWERS ALSO LOVE TO GO OUTSIDE!

Large flower varieties like HALIOS® and LATINIA® also feature prominently outdoors in a dry Mediterranean climate type. Their substantial flowers and large plant diameter are unfailingly eye-catching.

They have shown to be heat tolerant and long lasting flowering in southern Europe, where they are widespread in cities such as Cannes (France), Barcelona (Spain) and Monaco, as well as in other parts of the world with similar climates, such as Los Angeles (USA) and Melbourne (Australia).

TESTING METHODOLOGY

LOCATION :
Fréjus, Southern France

CLIMATE:
Mediterranean; hot dry summers, mild wet winters

QUANTITATIVE & QUALITATIVE DATA:
Every week each variety is evaluated according to the following criteria:

- Vigour and resistance, especially to hydric stress and fluctuations in temperature
- Average number of flowers per plant
- Quality and lifespan of foliage
- Uniformity of plants behaviour per group
- Combined appreciation of multi criteria
- A minimum score of 7/10 is required to obtain the OUTstanding® label.

View the 66 OUTstanding cyclamen® varieties in the list of varieties on pages 22-23, with two new additions:

- **SMARTIZ® Rose Bengal 6084**
- **ABSOLU® de Morel 4702**

TESTING CONDITIONS:

Containers put out in the full sun without shade in an area exposed to wind and torrential rain.

DATA COLLECTION:

The 2021-2022 season was the driest on record in recent years.

Temperatures were relatively lower than the averages recorded in recent years. Temperatures dipped below 0°C (28°F) in early December before rising over a two-week period at the end of the year.

VIEW RESULTS >

MOREL CYCLAMEN, HEAT TOLERANCE IS IN OUR DNA

The Morel family has been growing cyclamen since 1919. They start in 1945 the breeding of cyclamen varieties in the south of France (Mediterranean climate).

This climate is characteristically hot with intense daylight and sizable fluctuations in rainfall. Long very dry spells alternate with brief intervals of heavy rainfall.

These climatic factors all affect how cyclamen are grown in various ways (*temperature, light and hydric stress*).

The cyclamen's natural defences against these stresses take the following forms:

- Larger sized first leaves when the plant grows at an ADT of over 25°C (77°F)
- Slowing or halting of root development and plant growth
- Delayed flowering by up to six weeks
- Fading of colours

Combining two resistant parental lines results in F1 Hybrids that are SUPER RESISTANT!

Years of research combined to this breeding pressure narrowed parental lines down to those with unique genetic traits. (*Vigour, heat tolerance, intense light tolerance, vivid colours*).

The inherent vigour of hybrids allows growers to grow crops under stressful conditions while ensuring a quality end product.

The stems are robust even when growing in very shady conditions. Varieties that do not tolerate heat are automatically removed.

What happens when varieties bred in the South of France are grown in a Northern climate ?

- Sharp reduction in average growing times
- More intense colours than usual
- Reduction in flowering time windows, with late bloomers catching up to early ones
- Smaller leaves
- Larger flowers
- Rounder, more compact plants
- More robust plants in greenhouses, retail and at the consumer
- Higher outdoor performance

Global warming is opening up new prospects for cyclamen in more northerly regions by lengthening the period of good quality flowering in autumn.

BEST OF CYCLAMEN BREEDING

A RED FOR EVERY SEASON

From Mini to Maxi sized flowers, Morel red cyclamen have undergone continual improvement for close on a century. Their excellence is widely acknowledged on account of their intense, long lasting stable colour and the resistance of the varieties in different climates.

FEEL FREE TO CONTACT OUR TECHTEAM

(ALL QUESTIONS ARE WELCOME)

TECHNICAL SUPPORT AT HAND:

Our technical advisors are available to offer you personalized support during all phases of cultivation with connected measurement tools.

Data loggers allow you to respond to unforeseen events with minimum delay.

A great help for decision making thanks to the control of essential cultivation parameters, such as:

- Temperature (ADT)
- Light (PAR)
- Watering (water sensor)
- Humidity (RH% dew point)
- Fertilizer

This technical cooperation over time is a real **POSITIVE POINT** for the success of your crop...

VIDEOCONFERENCING:

Relevant technical matters are discussed throughout the growing process. Advice is given in your language by the person in charge of your area.

Videoconferences are an opportunity to discuss and share on a personal level.

Learn about the three topics covered in 2021:

- Rooting stage
- Light management
- Moisture monitoring

Documents and recorded video calls available on request.
